First GoToMeeting? Let's do a quick system check: <https://link.gotomeeting.com/system-check>

Time-zone [conversions](#).

**NOTE:** In order to optimize the call experience next week, we have developed the following guidelines for your kind attention:

- Connect digitally (not by phone), if possible: The best experience is where all participants use a digital connection, that is, a USB headset, connected to a computer. If a USB headset is not available, then a headset that connects via a 3.5mm audio plug but bear in mind, this is an analogue connection and may be subject to some interference.
- Connection using a mobile device, such as an iPhone/iPad or Android phone/tablet, and the GoToMeeting app, with an earpiece also works very well. NB: wireless Blue Tooth earpieces can sometimes add a delay to the call.
- If connection is via a computer, using the computer's speakers and a separate microphone, or a phone/tablet without earpiece, it is critical that participants mute their microphones at all times except when speaking. It is also important that participants using just a laptop or PC without headset do not use their keyboard for typing during the call, as their keyboard activity affects all participants
- Participants should try to locate themselves in a relatively quiet environment for the duration of the call, if possible.
- Connection using a conference phone on loud speaker, or any desk telephone on loudspeaker will, unless correctly configured, introduce interference and echo to the call, affecting the experience of all participants. Use of this connection is to be avoided.
