

To whom it might concern

Subject: Recommendation

During the period of April-August 2018, Elevate Global DOO Skopje executed the Error Analysis Insight project for the department of Energy Planning and Procurement at EVN Macedonia. This project delivered tools that help the department of Energy Planning and Procurement to better understand the origin of the load forecasting error, to identify the consumers' power consumption behavior and to suggest possible solutions for reducing this error. Additionally, Elevate Global provided the Automated Load Forecasting tool that estimates the optimal load profiles for the customers obtained using data-driven predictive approaches based on historical data. The tools provided by Elevate Global help the expert team of EVN to reduce significantly the load forecasting error for the given customers portfolio during three months period, (May, June and July 2018).

Together with Elevate Global, we enhance our operations and excel the decision making process using the data we have. Therefore, it's my pleasure to recommend Elevate Global DOO Skopje as your partner for Machine Learning and Data Analytics.

Please feel free to contact our expert Nikola Ushinov, Dipl. Ing. (nikola.ushinov@evn.mk) should you like to discuss Elevate Global's qualifications and experience further. He'd be happy to expand on my recommendation.

Best wishes,

Dipl. Ing. Stefan PETER, MBA

Chairman of the Management Board of EVN Macedonia AD, Skopje
