

Middle East Hospital

Innovation of EMR (electronic medical record) Audit Tools for Physicians. Healthcare sectors are facing the biggest challenge to complete the Patients' medical records on time. Due to difficulties in auditing the huge number of medical records, the quality of the medical record is the biggest constraint to meeting compliance and patients' safety. To overcome this issue, we have implemented automatic auditing tools and a monitoring system. Doctors will get notification of all the incomplete medical records on their clinical screen. Similarly, the Medical record department will be notified about the incompleteness of files. The whole process was appreciated by National Health Regularity Authority while having the accreditation. We achieved the highest status which is "Diamond" in NHRA accreditation.
